Enjoy your deck. Keep it cared for.

A practical companion to your project documents. Confirm your installed products before choosing cleaners or equipment. Their current manufacturer instructions govern product care.

TimberTech decking: identify it, then clean it

Confirm whether your boards are capped composite or Advanced PVC; older collections can have different instructions. For current products, use the recommended TimberTech DeckCleaner and brush: nylon for composite; stiff natural fiber for Advanced PVC. Do not use the PVC brush on composite.

Work in small sections out of direct sunlight. Scrub as directed and rinse thoroughly before cleaner dries. Keep gaps free of leaves and debris. A hose is suitable for rinsing. If using a pressure washer, TimberTech permits rinsing only, with a fan tip, at no more than 1,500 psi, along the grain.

Westbury aluminum railing

DSI recommends regular cleaning with mild detergent and water. Avoid abrasive cleaners and harsh chemicals. Follow the DSI aluminum care guide for the installed system, including its cleaning frequency and log requirements. Do not assume a decking cleaner is appropriate for your railing.

Seasonal checks and winter care

Look for loose railing, damaged boards, unusual movement or drainage problems. Report concerns rather than altering structural connections yourself. Have the framing and connections reviewed periodically by a qualified professional.

TimberTech surfaces can be slippery in freezing weather. Use an all-plastic snow shovel. Avoid rock salt and abrasive ice-melt products; check the product guide before using calcium-chloride ice melt. Avoid rubber-backed mats and prolonged contact with nonporous objects.

Roof covers, fencing and underdeck ceilings

Use the care instructions for the exact roof, ceiling, drainage and fence materials installed. Watch for blockages, leaks, loose parts and gates that no longer operate normally. Contact us about persistent drainage issues. Arrange safe professional access for elevated gutters, roofs or electrical components.

Current manufacturer instructions

TimberTech care and cleaning | DSI / Westbury care guides and logs

Guidance checked October 6, 2026. This general handout does not replace the care instructions, warranty terms or written scope for your project.

Your project & care record

Complete this with your crew at handoff. Keep the proposal, change orders, warranty documents and manufacturer registrations together.

Warranty questions or concerns

Jensen Custom Decks provides two years of workmanship coverage from substantial completion, subject to the terms of your written agreement. Material defects are covered separately by the applicable manufacturer. Routine care and normal weathering are different from a covered workmanship defect.

Contact (314) 496-6418 or greg@jensencustomdecks.com with your project details, a description and photos. Your signed agreement and applicable warranty documents control coverage, exclusions and claim requirements.
